Help

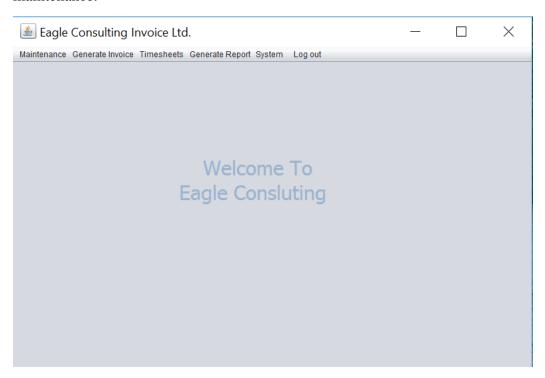

Login screen

This is the login screen, where the user enters the login credentials and sign in to the system.

Main screen

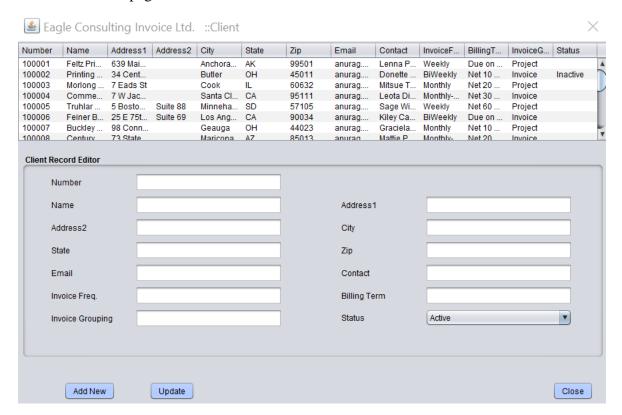

After the user logs in to the system, the page redirects to the main screen in which we have a menu tab for selection. It consists of options for maintenance, time sheets, generate invoice, reports, user maintenance.

Maintenance screens

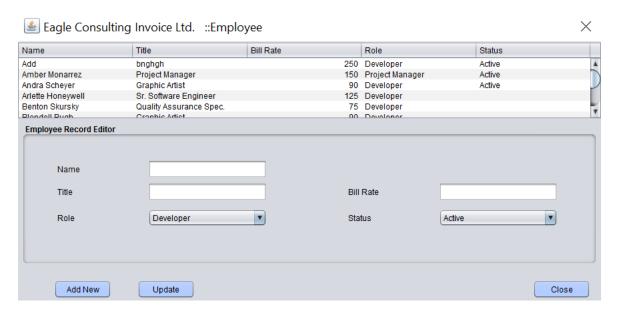

Client maintenance

This is the client maintenance screen, in which we can add, update the details of the clients. When we click update the data is updated and saved into the database. And by clicking close the page redirects to main page.

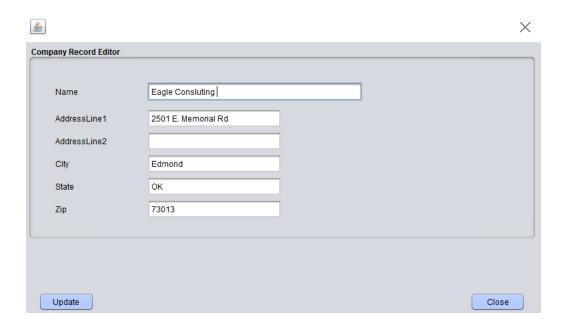

Employee maintenance

This is the employee maintenance screen, in which we can add, update the details of the employees'. When we click update the data is updated and saved into the database. And by clicking close the page redirects to main page.

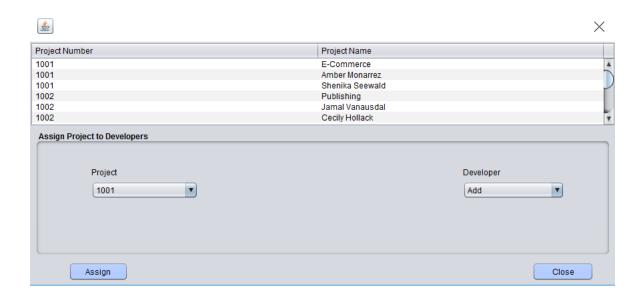

Company record maintenance

This is the company data maintenance screen, in which we can update the details of the company. When we click update the data is updated and saved into the database. And by clicking close the page redirects to main page.

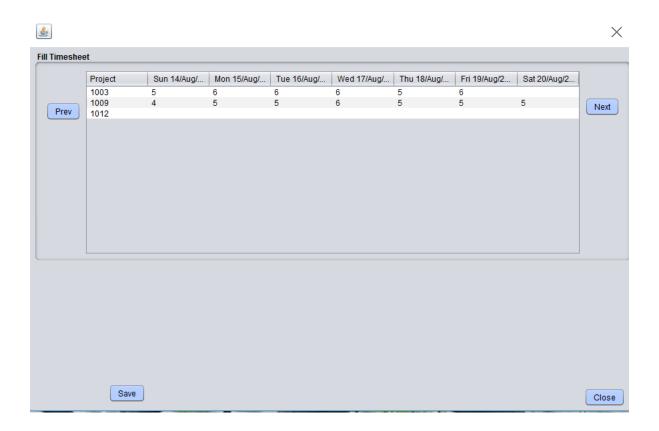

Assigning projects

This is the assigning projects screen, in which we can assign the projects to the developers. When we click assign, the developer is assigned and saved into the database. And by clicking close the page redirects to main page.

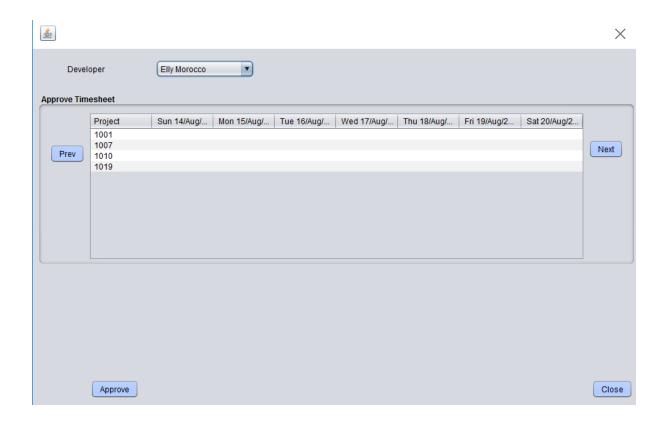

Time sheets filling screen

This is the time sheets filling screen, in which we can fill the time worked by the employees'. When we click save, the data is updated and saved into the database. By clicking previous button, the page displays the previous weeks' time entry screen and if we click next button the page displays the next weeks' time entry screen. And by clicking close the page redirects to main page.

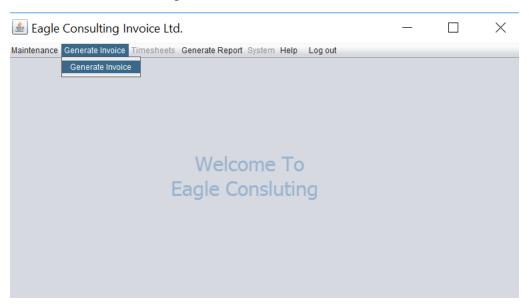

Time sheets approval screen

This is the time sheets approval screen, in which a project manager can approve the time worked by the employees'. We can select an employee from the drop down list of employees. When we click approve, the data is approved and saved into the database. By clicking previous button, the page displays the previous weeks' time filled screen and if we click next button the page displays the next weeks' time filled screen. And by clicking close the page redirects to main page.

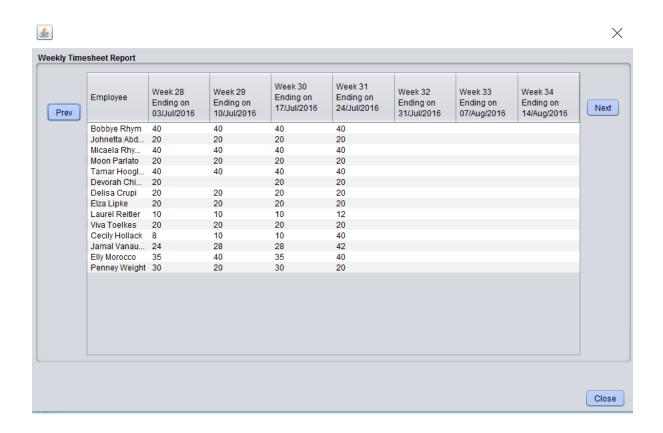

Generate Invoice

In the menu tab of the main page if we click generate invoice, then the system generates invoice and send emails to the respective clients.

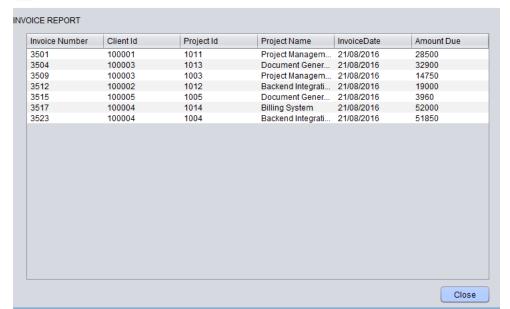

Generate reports

These are the screens of different reports. When we click generate reports in the menu tab of main page, we have an option of choosing what type of reports we are going to generate. If we click budget report the page redirects to the budget reports screen and same for the other reports. And by clicking close the page redirects to main page.
